Abstracts

Boron nitride is a crystal of nitrogen and boron atoms. The chemical composition is 43.6% boron and 56.4% nitrogen, with four different variants: hexagonal boron nitride (HBN), RBN, CBN, and wurzite boron nitride (WBN). It is widely used in high voltage high frequency electric and plasma arc of insulators, automatic welding of high temperature resistant coatings, high frequency induction furnace materials, semiconductor solid admixture, the structure of the reactor materials, packaging materials, to prevent neutron radiation of radar transmission Windows and rocket engine, radar antenna medium composition, etc. Widely used in high voltage high frequency electric and plasma arc of insulators, automatic welding of high temperature resistant coatings, high frequency induction furnace materials, semiconductor solid admixture, the structure of the reactor materials, packaging materials, to prevent neutron radiation of radar transmission Windows and rocket engine, radar antenna medium composition, etc.
