Satellite broadband is network connectivity provided through low-earth-orbit (LEO) or geostationary satellites, with the latter providing much faster data rates. Satellite communication offers a wide variety of features as well as some technical limitations compared to traditional broadband Internet services. Satellites placed in geostationary orbit can deliver Internet speeds of about 0.5 Mbps. However, the speed is limited to 80 Kbps on transmissions from the user. In rural areas, this speed is typically more than what is available through other means.
