Abstracts

Bronchoscopy technology has advanced with the development of robotic-assisted bronchoscopy (also known as robotic bronchoscopy). This technology allows physicians to move the flexible bronchoscopy tube with precision using a controller. The tube used in robotic bronchoscopy is typically smaller than those that may be used in traditional bronchoscopy. The physician uses the controller to move the small tube in precise ways which allows the physician to reach parts of the lung that may have been challenging to access with traditional bronchoscopy techniques.
