Abstracts

A book paper (or publishing paper) is a paper that is designed for the publication of printed books, magazines and so on. Traditionally, book papers are off-white or low-white papers (easier to read), are opaque to minimise the show-through of text from one side of the page to the Others, and are (usually) made to tighter caliper or thickness specifications, particularly for case-bound books. Typically, books papers are light-weight papers 60 to 90 g/m² and often specified by their caliper/substance ratios (volume basis). For example, a bulky 80 g/m² paper may have a caliper of 120 micrometres (0.12 mm) which would be Volume 15 (120÷10/80), whereas a low bulk 80 g/m² may have a caliper of 88 micrometres, giving a volume 11. This volume basis then allows the calculation of a book's PPI (printed pages per inch), which is an important factor for the design of book jackets and the binding of the finished book.

The market for Book Paper is highly fragmented with players such as International Paper, UPM-Kymmene, Asia Pulp and Paper, Svenska Cellulosa Aktiebolaget, Stora Enso, Oji Paper, Nippon Paper Group, Norske Skog, Nine Dragons Paper, Chenming Paper, Sun Paper Group, Huatai Paper, Glatfelter, Shandong Tranlin, Dahe Paper, Guangzhou Paper, Xinya Paper Group and so on.

The industry is expected to remain innovation-led, with occasionally acquisitions and strategic alliances adopted as the key strategies by the players to increase their industry presence. Market stays in mature period with a clear concentration. There hardly to have obvious technology breakthrough except deeper system function integration. Meanwhile, optimize product mix and further develop value-added capabilities to maximize margins.

Manufacturers can take advantage of this situation by reinforcing their production units

and supply-chains to avoid any delay in production turn-around-times (TAT) and supply-lead-times.
