Abstracts

Flexible packaging is increasingly being used in major consumer brands. There is also some new introduction of products in the flexible packaging market such as vacuum pouches, high temperature retort pouches, and stand-up pouches, which has led to a change in global packaging trends. Addition of layers into the flexible packaging structure can lead to improvements in its functionality and economic viability. Flexible packaging products use over 70% less plastic than rigid packaging options and also acquire a small space on shelves during packaging. Lightweight characteristics of flexible packaging makes its recycling easier. Flexible packaging provides a wide range of presentation possibilities that enable the product manufacturer to increase the aesthetic appeal of the product and also enhance the product branding. This increases the inclination of product manufacturers towards the adoption of flexible packaging solutions over rigid packaging solutions.
