Abstracts

In the modern dynamic world of technology, the camera modules are widely used in a range of applications such as consumer electronics, healthcare, industrial, security & surveillance, automotive, and aerospace & defense. The consumer electronics market has impacted the camera modules market mostly owing to the usage of CCD and CMOS sensors-enabled camera modules. The demand for digital camera has reduced as smartphones enabled with camera are introduced in the market. Consumers are attracted toward smartphones which serve the purpose of both camera and phone. This market is experiencing a rapid shift in automotive applications, specifically in advanced driver assistance systems (ADAS). ADAS uses camera modules to enhance the driver's safety on the road by offering features such as parking assistance, lane-departure warning (LDW), and collision avoidance systems, all of which can help the car and the driver to gather information about the outside world.
