Abstracts

Cancer/tumor profiling provides information about the genes causing cancer, which would offer useful insights related to the mechanism of cancer. The potential of cancer profiling is not only limited to common cancers, such as lymphoma and breast cancer, but also is useful in molecular profiling of lung cancer, prostate cancer, and acute leukemia. Cancer profiling has plays a vital role in diagnosis at the molecular level, as better understanding of the cancer tumors helps physicians to make appropriate therapeutic decisions and avoid “over-treatment” of the cancer patients.
