Abstracts

The non-invasive stem cell obtaining procedure, augmented possibility of accomplishing high quality cells, and lower price of therapy coupled with high success rate of positive outcomes have collectively made allogeneic stem cell therapy a preference for veterinary physicians. Moreover, allogeneic stem cell therapy is 100% safe, which further supports its demand on a global level. Pet owners are identified to prefer allogeneic stem cell therapy over autologous therapy, attributed to its relatively lower costs and comparative ease of the entire procedure.
