Abstracts

Cannabis is a genus of flowering plants in the Cannabaceae family. Its three species are cannabis sativa, cannabis indica, and cannabis ruderalis. Cannabis seeds are rich in protein; fiber; and healthful fatty acids, such as omega-3s and omega-6s. The seeds are high in arginine (amino acid) and gamma-linolenic acid (fatty acid) content. These substances help reduce the risk of heart diseases, cure chronic pain, and improve neurological and other conditions. Other nutrients found in these seeds are calcium, potassium, vitamin E, sulphur, phosphorous, magnesium, and zinc. These are rich in vitamin E and can be eaten by those who are unable to tolerate nuts, gluten, lactose, or sugar.
