## Abstracts

The digital cockpit is a term used for digital experience within a car covering multiple screens, digital assistants and different means of input. In other words, a digital cockpit is a digital screen in place of a traditional instrument cluster. It can come in the form of multiscreen displays (digital instrument clusters that replace analog gauges behind the steering wheel), heads-up displays (instrument data for the driver that appears behind the windshield), infotainment systems or even copilot screens

Digital cockpits are also relevant to connected vehicles, and even autonomous vehicles (think full glass cockpits). A major part of using your connected car is understanding all the tools and apps at your disposal, but doing so can be overwhelming. To fully utilize your connected car, it needs to have a robust and well-designed digital cockpit to use all functionalities to its proposed potential.
