Cardiac imaging comprises intravascular ultrasound, echocardiogram and coronary catheterization. Intravascular ultrasound is an imaging technique carried out with the help of specially designed catheters attached to computerized ultrasound equipment to visualize the lumen and interior wall of blood vessels. Echocardiogram is a test that uses two-dimensional, three-dimensional, and Doppler ultrasound to create images of heart. Coronary catheterization is a minimally invasive procedure utilized for pressure monitoring and blood sampling with the help of catheter inserted in the heart.
