Abstracts

Cardiac Reader System provide high throughput point-of-care solutions for the diagnosis of myocardial infarction and other cardiac-related diseases by measuring levels of STAT, cardiac troponin, CKM and CKB, myoglobin and/or D-dimer in approximately as low as 14 minutes; equivalent to 36 tests per hour. A cardiac marker analyzer can accomplish these tests through immunochromatographic assays. A cardiac reader increases efficacy and accuracy with special features such as software, to provide an internal standard to compensate for inherent membrane variability between assays, and built in LCD displays for ease of use and visual clarity. Cardiac marker analyzers are important for the prevention of the misdiagnoses of cardiac conditions, an unfortunate, common occurrence.
