## Abstracts

Concentrates may serve as carriers for various feed ingredients such as vitamins and minerals (macro and micro), as well as a variety of feed additives. Concentrates are low-fiber, high-energy feeds. They may be low, medium, or high protein. Most often they are fed to raise the energy level of the ration for dairy cattle and to compensate for any other deficiencies that remain beyond those provided by the forage portion of the ration. Farmers can use energy feed such as grain or by-product of grain processing to make compound feed with concentrated feed, so as to reduce feed costs and improve the efficiency of the breeding industry. The key technology of concentrated feed for cattle lies in the accurate supply of core nutrients such as protein, vitamins, micronutrient, amino acids, etc. . It can meet the needs of cattle for a variety of nutrients, no need to add other additives.
