Abstracts

Cellulosic thickeners is a hydrophilic white powder in pure form, which dissolves in cold water, forming a clear viscous solution or gel. Cellulosic thickeners are used extensively in wide range of applications such as biodegradability, lack of toxicity, and abundant raw material. Cellulose thickeners are also named as cellulose gum, which are used as emulsifiers, suspending agents and thickeners in cosmetic and pharmaceutical applications. Cellulosic thickeners are also used in chromatography as stabilizers for reagents and in therapeutics as bulk laxative with antacid properties. Cellulosic thickeners are also added to hair shampoo, liquid soap, and toothpaste in order to create their characteristic thick consistency. Cellulosic thickeners can be engaged as a mild glue which can be washed away with water. The increasing application of cellulosic thickener is driving the overall global cellulosic thickeners market to grow at significant CAGR in near future.
