## Abstracts

The centerless grinding wheel is a grinding wheel installed on the centerless grinding machine. It interacts with the guide wheel and the supporting plate to form a grinding method. The workpiece to be processed is supported by the supporting plate, and the guide wheel moves to the direction of the supporting plate. When the circular motion drives the workpiece to rotate, it is ground by a centerless grinding wheel. When grinding the workpiece, the surface quality is high and the precision is relatively high.
