In the cold winter months of the year, with the rain, snow and wind outside, it is wonderful to relax inside a warm premise. The central heating systems are used to make the premises/offices comfortable inside in these seasons. Central heating system makes the whole internal premises of a building warm from one point to number of rooms. The whole system is called as heating, ventilation, and air conditioning (HVAC) when they are combined with more systems to control the building temperature. The heat is delivered in one place, such as basement/furnace room or mechanical room in large buildings. The heat is distributed throughout the building and forced through pipes.
