## Abstracts

Ceramic Substrate Circuit Board is a printed circuit board with ceramic base material, which is highly thermally conductive materials such as alumina, aluminum nitride, as well as beryllium oxide, which can make a quick effect on transferring heat away from hot spots and dissipating it over the whole surface. What's more, Ceramic Substrate Circuit Board is fabricated with LAM technology, which is a laser rapid activation metallization technology. So Ceramic Substrate Circuit Board is highly versatile that can take place of the entire traditional printed circuit board with a less complicated construction with enhanced performance.
