## Abstracts

The contract for differences (CFD) offers European traders and investors an opportunity to profit from price movement without owning the underlying asset. It's a relatively simple security calculated by the asset's movement between trade entry and exit, computing only the price change without consideration of the asset's underlying value.<sup>1</sup>

This is accomplished through a contract between client and broker and does not utilize any stock, forex, commodity, or futures exchange. Trading CFDs offers several major advantages that have increased the instruments' enormous popularity in the past decade.
