Several minerals are important for human health. Without these minerals, it is very difficult for body to build bones, generate a new blood cells, and to maintain a proper function of immune system. According to an independent study, most of the American population do not get sufficient amount of minerals in their daily diet. Therefore, they are preferring for chelated minerals to make sure that body has sufficient nutrients to function appropriately. When consumers searching for multivitamins they mainly look for dietary supplements that contain chelated minerals. Chelated minerals are essential for aging population owing to decrease in their stomach acid strength which leads to improper absorption of minerals by body. Thus, chelated is a process in which minerals such as selenium, magnesium, chromium and calcium are combined with amino acids or peptides to form complexes, which make them more readily to absorb by the body. Chelated selenium is an essential element of glutathione antioxidant agent which helps in overcome the effect of free radicals include premature aging. Additionally, chelated selenium have a multiple applications such as development and functioning of cells in human and other animals. Chelated selenium is also necessary for the development of prostaglandins and other substances that affect blood pressure. Chelated selenium reduces the risk of heart related diseases and protect the eyes against cataracts.
