Chitosan fiber is a cellulose based fiber modified by chitosan. The main structure of the fiber is composed of cellulose, the same as viscose, whereas a two-component composite, cellulose and chitosan, forms the skin on fiber surface. Chitosan is a product derived from Chitin, a compound of natural origin obtained from the shell of crab and shellfish, chitin is an absolutely 'safe' material, with a scientifically proved biocompatibility, and it is used in medical, health and pharmacological fields too.
