## Abstracts

End-user computing and support organizations use client management tools (CMTs) to automate endpoint management tasks. CMTs perform the following technical functions:

- OS deployment
- Hardware and software inventory
- Software distribution
- Patch management
- Configuration management (e.g., scripts)
- Security configuration management
- Remote control

Organizations primarily use CMTs to manage PCs running Microsoft Windows and Apple macOS. Although most organizations still leverage separate management approaches for mobile devices and PCs, unified endpoint management (UEM) supports the convergence of enterprise mobility management (EMM) and CMT functionality.
