Abstracts

Mass spectrometry is an analytic technique with high specificity and a growing presence in laboratory medicine. Various types of mass spectrometers are being used in an increasing number of clinical laboratories around the world, and, as a result, significant improvements in assay performance are occurring rapidly in areas such as toxicology, endocrinology, and biochemical genetics. Clinical mass spectrometry uses the mass spectrometry technology for diagnostic purposes. Employed by medical labs, clinical mass spectrometry is used to diagnose metabolism deficiencies, to determine whether biomarkers or enzymes are present, and for toxicology testing.
