Abstracts

Cloud Access Security Broker (CASB) eliminates cloud security issues by delivering a single solution to secure sensitive customer information across all cloud or on-prem applications. CASB acts as a gatekeeper, allowing organizations to extend the reach of their security policies beyond their own infrastructure. Cloud Access Brokers enforce a number of different security access controls, including encryption and device profiling. CASBs are particularly useful in organizations with shadow IT operations or liberal security policies that allow operating units to procure and manage their own cloud resources.
