Cloud Based Simulation Is an approach that provides a new way to utilize computing resources in the simulation.

Simulation is widely used in science and industry to study a variety of problems across a wide range of domains . Typically to study a problem, a model of a system is built and then simulated under different conditions . Examples include how a biological system might change over time in response to different drug treatments, how different manpower planning strategies impact healthcare provision, how to optimise the design of a wind turbine, and how production could be improved in a factory.
