Cloud platforms let their users acquire virtual machine for a restricted occasion, and this can operate a database on such virtual machinery. Users can both upload their individual mechanism image along with the database installed on it, or use ready-to-use machine pictures that already consist of an optimized fixing of a database. For instance, Oracle offers a ready-to-use machine picture with setting up with Oracle Database 11g project publication on Microsoft Azure & Amazon and so on. Through a database as a service form, application purchasers do not have to fix and retain the database themselves. As a substitute, the database service supplier takes liability for fixing up and retaining the database and appliance purchases are charged based on their practice of the service.

Database as service suppliers is not restricted to cloud computing platforms. For instance, MongoDB as a service supplier mLab let their consumers to horde their databases on Google Cloud Platform AWS or Azure. Database sellers have also started their individual services in this model.
