Abstracts

The cloud infrastructure is flexible and scalable, making it an ideal choice for enterprise computing. By using technologies such as hyper-fusion or composite infrastructure, you can transform an internally deployed data center into a cloud-like infrastructure that can be integrated into a cloud system and managed from a single dashboard. The only difference between cloud infrastructure and a typical data center infrastructure is that the former is virtualized and provided as a service for use over the internet. Servers, storage, computing resources, and security are all key components of cloud infrastructure.
