Abstracts

Cloud security is the protection of data, applications, and infrastructures involved in cloud computing. One of the biggest current applications of the cloud in healthcare is data storage. The healthcare industry works with a tremendous amount of data, and even the most sophisticated hardware installations can't handle it all. Cloud networks allow healthcare professionals to store all the data they use off-site to avoid the cost and strain of maintaining physical servers.While the need for healthcare is 24/7, certain periods like the cold and flu season require more of the healthcare provider's attention. The cloud can scale to increase or decrease data storage and traffic depending on the client's needs. Thus, healthcare providers are able to fit their network requirements to match their service demands.

This report contains market size and forecasts of Cloud Security in Healthcare in Global, including the following market information:

Global Cloud Security in Healthcare Market Revenue, 2017-2022, 2023-2028, ($ millions)

Global top five companies in 2021 (%)

The global Cloud Security in Healthcare market was valued at 7440.4 million in 2021 and is projected to reach US$ 14370 million by 2028, at a CAGR of 9.9% during the forecast period.

The U.S. Market is Estimated at $ Million in 2021, While China is Forecast to Reach $ Million by 2028.
