## Abstracts

A CNC touch probe is an option that attaches to your tool and scans and records existing surfaces, so they can then be added to your CAD package to be scaled, modified, and reproduced in the shop.

Let's say you wanted to machine a 3D surface for a project, but you can't find a 3D model of said surface. You do, however, have an actual part. If you could find a way to duplicate the 3D surface, you could reproduce it with your CNC machine.
