Abstracts

Endotracheal tubes are medical devices used for intubation into the trachea to maintain an open airway and to administer certain drugs. They are used for mechanical ventilation, thus there is risk for microbial invasion into the airways. Therefore, to prevent or reduce the incidence of hospital acquired infection or ventilator-associated pneumonia (VAP), endotracheal tubes are coated with a drug-releasing coating that releases antimicrobial agents to inhibit bacterial growth and biofilm formation. Coated endotracheal tube includes variety of endotracheal tubes coated with drugs or materials, which offer antimicrobial properties to endotracheal tube. Coatings include heparin, silver, chlorhexidine, rifampicin, and minocycline agents.
