## Abstracts

Cognitive impairment can strike at any age, from infancy to old age. It can be brought on by a number of reasons, both reversible and irreversible. Malnutrition, prenatal drug exposure, genetic disorders, and chromosome abnormalities are also possible early causes. Because the brain keeps its neuroplasticity until late adulthood, there has been an increase in the demand for cognitive evaluation and training. Due to factors such as increased awareness about brain fitness, technological developments, and a growing geriatric population, the global Cognitive Assessment and Training Healthcare Market is predicted to rise significantly during the forecast period. Although these aspects contribute to the market's growth, the necessity for evaluations in a variety of languages might be a major impediment to the market's expansion.
