Abstracts

Cold headed parts denote a type of finished or stock shape produced through a specialized process more broadly known as cold working or cold forming. Although the terms 'cold working,' 'cold forming,' and 'cold heading' are often used interchangeably, cold heading is technically a subset of the larger group of manufacturing processes known as cold working or cold forming. Cold heading specifically refers to the process of enlarging sections on the end of tubular pieces such as rods or wires. However, a proper understanding of cold heading can only occur within the larger context of cold working as a subject.
