Colon cancer is the cancer of large intestine which form the lower part of the digestive system. The disease usually begins with a small, benign clusters of cells known as adenomatous polyps. If left untreated, these polyps may result into colon cancer. Therefore, regular screening for polyps through colonoscopy in order to prevent it transforming to colon cancer is recommended. Change in bowel habits or blood in stool are the major symptoms of colon cancer. Attributable epidemiological factors can be precancerous growth in the colon or genetic mutation. The American Society of Clinical Oncology (ASCO) recommends patients affected with colon cancer, for testing of genetic mutation in the KRAS gene which accounts for about 30% to 40% of colon tumors.
