Abstracts

Combined hormonal contraceptive basically made by a combination of an estrogen and a progestogen which are primarily used to prevent unwanted pregnancies. Combined hormonal contraceptives are one of the effective contraceptives in modern medicine. Since late 1950s variety of innovation has been developed to improve the efficacy and safety of combined hormonal contraceptive. The trends have been shifted towards less androgenic progestogens and lower doses of estrogen and progestogen. Changing in drug doses and modification in drug component with the incorporation of new technologies that can reduce the risk factor and the continuing development of novel delivery systems that can be helpful to fulfill unmet needs of the market. The other health benefits of combined hormonal contraceptives include they reduce the risk of iron deficiency anemia, endometriosis, used in treating acne vulgaris, irregular menstrual flow, and polycystic ovarian syndrome. The mechanism of combined hormonal contraceptive is inhibition of follicle stimulating hormone and luteinizing hormone. Ethinylestradiol is the most common estrogen used in combined hormonal contraceptives, whereas other hormones are also used. The combined hormonal contraceptive products are available in various forms whereas pills have the maximum share in the combined hormonal contraceptive market. According to the Association of Women Health, around 100 million women use combined hormonal contraceptives throughout the world.
