Abstracts

There is a practical need for socks as human feet sweat heavily, and hence a covering of cloth on the feet absorbs the sweat and draw it out towards the air, where it can evaporate. The sweat of our feet can also damage the outer footwear, and hence socks are needed to protect the shoes and give a sense of comfort and freshness to the feet of the wearer. A good comfort dress socks does the function of absorbing sweat and distributing it evenly through the socks material to the outer surface that is known as wicking. Wicking is an important function in order to keep the feet away from the sweat. Otherwise bacteria may start feeding on it giving rise to many bacterial infections. The important characteristics that comfort dress socks must possess are that the socks should wick away the moisture away from the feet to the exterior of the socks. Also, the comfort dress socks should help to cushion the arch of the feet from the ground, and prevent the skin of the feet to rub against the inside of the shoes. In addition, comfort dress socks should not sag from the feet when worn, and it should fit perfectly to the feet, giving a trim and a cool look to the wearer of such socks. Also, the comfort dress socks shouldn't be made of a thick material, which causes problem in the wearing of the shoes and distorts the trouser cuff.
