Aircraft electrical systems are useful for generation, distribution, and regulation of the power supply throughout the aircraft. The system includes power sources such as generators and batteries, various components such as conversion devices, protection devices, and control devices and power distribution systems that comprise wires, cables, and busbar systems. The primary electrical loads in an aircraft include motors, avionics, heating systems, and lighting systems. Environmental control system (ECS) is used in aircraft to maintain the comfortable environment in the cabin of an aircraft. It maintains the optimal level of oxygen, cabin pressure, humidity, and temperature. ECS also circulates air in the cabins by replacing it every two or three minutes.
