Abstracts

Commercial freezers refer to the refrigerated or frozen freezers that are exclusively used for the storage of ice cream, beverages, dairy products, quick-frozen foods, food materials, etc. The liquid refrigerant is compressed into a high temperature and high pressure gaseous refrigerant by a compressor, and then sent to the condenser for heat dissipation to become a low temperature and high pressure liquid refrigerant, so the condenser blows out hot air. Then go to the throttling device to throttle and depressurize, and enter the evaporator. Because the space of the refrigerant suddenly increases from the capillary to the evaporator and the pressure decreases, the liquid refrigerant will vaporize and become a gaseous low-temperature refrigerant, thereby absorbing A lot of heat, the evaporator will become cold, using direct cooling or air cooling to achieve cooling in the cabinet.
