Abstracts

Composite pipes are prepared from reinforced and non-reinforced thermoplastics such as GRP, PVC, PP, FRP, and HDPE. Composite pipes have robust mechanical properties and are unaffected by corrosion. In comparison to the unreinforced pipe material for equivalent thickness and size, composite pipes are sturdier and stronger. Composites pipes are relatively better to resist forces during the installation process, which allows them to be drawn with higher force. Composites pipes are extensively preferred in trenchless technology as they are easier to install thus aiding the sales of composites pipe.
