Abstracts

Photovoltaic backsheets are photovoltaic encapsulation materials located on the back of the solar cell module, which mainly play the role of weather resistance and insulation protection for the photovoltaic cell module. According to the production process classification, the back sheet is mainly divided into composite type, coating type and co-extrusion type. The composite backsheets are mostly fluorine films processed with PVF or PVDF resin, which are bonded and compounded by an adhesive and a PET base film. It is the main production method of solar cell backsheets products at present. The KPF/KPE structure is the most common.
