Abstracts

A composting toilet is a type of dry toilet that treats human waste by a biological process called composting. This process leads to the decomposition of organic matter and turns human waste into compost-like material. Composting is carried out by microorganisms (mainly bacteria and fungi) under controlled aerobic conditions.[2] Most composting toilets use no water for flushing and are therefore called 'dry toilets'.

This report contains market size and forecasts of Composting Toilet in global, including the following market information:

Global Composting Toilet Market Revenue, 2017-2022, 2023-2028, (\$ millions)
