Abstracts

Compound semiconductor materials are a compound which comprises of elements from more than two different groups in the periodic table. Compound semiconductor materials can be in binary form, ternary form and quaternary form among others. Depending upon the form types there are wide range of compound semiconductors available. On the basis of form type the compound semiconductor materials are classified as III-Vs, II-VIs and IV-IVs and sapphire among others. III-IVs crystallize in zinc blend structure while II-VIs has crystalline structure. Compound semiconductor materials offer wider choice of bandwidth than elemental semiconductors such as Si and Ge. Compound semiconductor materials offer higher electron mobility, wider band gap and lower thermal noise than elemental semiconductors. Compound semiconductor materials have ability to generate microwave signals.
