Silicone elastomers are projected to be the most-dominant type of conductive silicones between 2016 and 2021. Silicone elastomers are of great importance due to their extraordinary characteristics such as electric properties, mechanical strength, shock resistance, moisture resistance, excellent adhesion properties, and aging and chemical resistance. Silicone elastomer are further segmented as HTV (High temperature vulcanize), LSR (Liquid silicone rubber), and RTV (Room temperature vulcanize) and are preferably used in the electronics & electrical industry. Owing to its high electrical & thermal conductivity, flexibility and high mechanical strength, silicone elastomers are rapidly growing in the conductive silicon market.
