Abstracts

Panning is an art of framing layers on candy-based centers in a very controlled way. Generally, it is carried out in a rotating pan called dragees pan. Sugar panning means the application of a thin coat of sucrose solution to every individual tumbling center followed by evaporation of moisture so that a thin layer of crystallized sugar is formed. Confectionery panning is a generic term for the continuous application of a fat-based coating to a prepared center. There are many fat-based coatings used in the manufacture of confectionery today. These include milk chocolate, dark chocolate, white chocolate, yogurt coatings, chocolate-flavored compound coatings and white coatings. The confectionery industry has been representing a multibillion dollar market for the past decade and is expected to reach new levels of growth within the next few years. Rising awareness about health benefits of consuming confectioner on a daily basis, will remain a key booster to the global confectionery panning product market over the next few years.
