Abstracts

Connected Car Software is a software that is equipped with Internet access, and usually also with a wireless local area network (LAN). This allows the car to share internet access, and hence data, with other devices both inside and outside the vehicle. For safety-critical applications, it is anticipated that cars will also be connected using dedicated short-range communications (DSRC) radios, operating in the FCC-granted 5.9 GHz band with very low latency.

This report contains market size and forecasts of Connected Car Softwares in Global, including the following market information:
