Abstracts

Adhesive is a chemical mixture, which holds at least two surfaces together to form a single unit. Sealant is a semisolid substance, which is used to fill the space between the two surfaces, thereby providing a barrier or protective coating. Adhesives have high shear and tensile strength and are used for holding and bonding applications. Sealants are preferably used for their ability to fill gaps, and resist relative movement of the substrates. They are more flexible, but have lower strength than adhesives.
