Abstracts

Construction Dry mortar is dry powder or granular material made by mixing dried screening process of fine aggregate, cementitious materials, additives, fillers, etc. Most of the dry mortar products contain both mineral cementitious binder (e.g. OPC) and polymer binder (e.g. re-dispersible powder) and they are normally packed in bags after mixing in the factory. Dry mortars offer three main advantages: firstly, they reduce quality problems caused by improper mixing conditions on small job-sites; secondly, they allow building much faster with ready-to-use, high performance products; thirdly, they save on labor costs. The Construction Dry Mortar industry can be broken down into several segments, Bricklaying/ Masonry Mortar, Floor Screed, Tile Adhesives/Grouts, Wall Renders and Plasters, EIFS Products, Other, etc.
