Abstracts

The growing concern over the adequacy of available friction between runway surface and airplane tires under certain conditions such as snow, water, and sludge on the runway is generating the huge demand for continuous friction testers. Moreover, problems associated with the take-off of jet planes from water or snow covered runway is creating potential growth opportunities for continuous friction tester market. The use of continuous friction tester helps in overcoming the problems such as airframe damage and engine ingestion, and therefore, due to this factor, the adoption of continuous friction tester is increasing swiftly at airports.
