Continuous welded pipe and tube is also known as electric fusion welding (EFW) tubes, which are tubes with a single longitudinal seam formed through a continuous welding process. The tubes are then heat-treated in a heating furnace and then mechanically squeezed to form a cylinder by squeezing the edges of the fibers. Reduce the risk of aging infrastructure and enhance fire safety. Can be used to replace the commercial, industrial and agricultural departments of aging water supply system, gas and oil pipeline crossing transport, in view of the industrial boiler, heating and cooling equipment, exhaust and ventilation, pressure pipeline used to transport corrosive medium and chemical process, and waste water discharge system, irrigated agriculture, in order to ensure food security.
