Abstracts

Due to rising urbanization, depletion of productive land and increasing use of land for the other usage have raised a challenging question about reductions in the agricultural yield. On the other hand, factors such as people struggling with the issue of food security and difficulty to meet the demand of food and overpopulation have led the farmers largely use controlled release fertilizers for increasing their yield. Modernized equipment is used by farmers to enhance the productivity of the farm. Due to rising effects of global warming and lack of rainfall over agriculture, people prefer controlled release fertilizers in order to maintain a consistent supply of grains.
