Abstracts

Conveyor belts are integral components of a conveyor system, and are used to physically transport bulk materials from one place to another in an incessant motion. Conveyor belt fabric is a type of material used in conveyor belts, which must be long lasting, durable and resistant to a comprehensive range of moisture, temperature and chemicals. Conveyor belts are manufactured out of many different materials, all with differing specifications, properties and benefits. Moreover, fabric conveyor belts are used to transport heavy abrasive materials such as rock, ore or gravel, which create hefty need of conveyor belt fabrics. In conveyor belt fabric, special fabric weaves are also presented for applications requiring high flex and high anti-tear properties. There is a wide range of belting fabrics available in the market that are used as reinforcement material inside the conveyor belts. Processed in multiple layers inside the conveyor belts, the belting fabrics are required to be resilient and offer requisite strength. The covering fabric of heavy duty conveyor belts primarily used and the skeleton material is steel wire, nylon, etc. Heavy duty conveyor belts are extensively used in the coal, steel, electricity, cement, building materials, mining, and other industries, excessive use of conveyor belts fabric for such industries escalates the market growth.
