Abstracts

A cordless phone is a model of telephone which replaces the coiled wire between the handset and base unit with wireless radio technology. A cordless phone is not the same as a wireless phone, however. The handset must be returned periodically to the base unit for recharging, and the base unit must be physically connected to both a telephone line and an electrical outlet.

Cordless Phones With Answering Machine refer to the cordless phones with built-in answering machines and the ability to have more than one handset dotted about your property.
